Energy and Sustainable Economic Development

In Europe:

22 million people directly employed in the farming sector;
44 million people gravitating around farming, food processing and retail or
services;

Agriculture is the most climate-dependent socio-economic sector.

Climate change is already affecting agriculture!

General framework

- ❑ Adaptation to climate change is a fundamental response for agriculture.
- ❑ Current intensive agricultural production and food systems cause severe problems (loss of biodiversity, water consumption, air pollutants emission).
 - ❑ Agricultural sector offers also opportunities for carbon storage.

Italian National Agency for New Technologies,
Energy and Sustainable Economic Development

Main climate change impacts on the agriculture sector for the main biogeographical regions in Europe.

*Credits: EEA Report 04/19,
p.18.*

Coastal zones

- Sea level rise
- Intrusion of saltwater

Mediterranean region

- Large increase in heat extremes
- Decrease in precipitation
- Increasing risk of droughts
- Increasing risk of biodiversity loss
- Increasing water demand for agriculture
- Decrease in crop yields
- Increasing risks for livestock production
- Agriculture negatively affected by spillover effects of climate change from outside Europe

Boreal region

- Increase in heavy precipitation events
- Increase in precipitation
- Increasing damage risk from winter storms
- Increase in crop yields

Atlantic region

- Increase in heavy precipitation events
- Increasing risk of river and coastal flooding
- Increasing damage risk from winter storms

Continental region

- Increase in heat extremes
- Decrease in summer precipitation
- Increasing risk of river floods

Mountain regions

- Temperature rise larger than European average
- Upward shift of plant and animal species
- Risk of hail
- Risk of frost
- Increasing risk from rock falls and landslides

WCRP
World Climate Research Programme

Coordinated Regional Climate Downscaling Experiment (CORDEX).

Coupled Model Intercomparison Project (CMIP).

To develop regional climate change projections to inform national and local impact assessments and adaptation plans.

Started in 1995 and now in its 6th phase involves more than 40 climate modelling centres from some 20 countries to deliver updated decadal climate predictions and climate projections around future scenarios to inform UNFCCC processes and Intergovernmental Panel on Climate Change (IPCC) assessments.

Climate Data Store

Earth's past, present and future climate

«The CDS is designed to enable users to tailor services to more specific public or commercial needs.»

opernicus
Europe's eyes on Earth

Climate knowledge path.

Models produce huge amounts of data. Climate simulations basically consist of expensive and time-consuming numerical experiments.

If climate and weather information are available but not used to modify the crop management, their value is lost.

High resolution Seasonal Forecast.

To capture all the phenomena that contribute to local changes.

Dive vast data sets to find essential variables. IA techniques, visual techniques, etc.

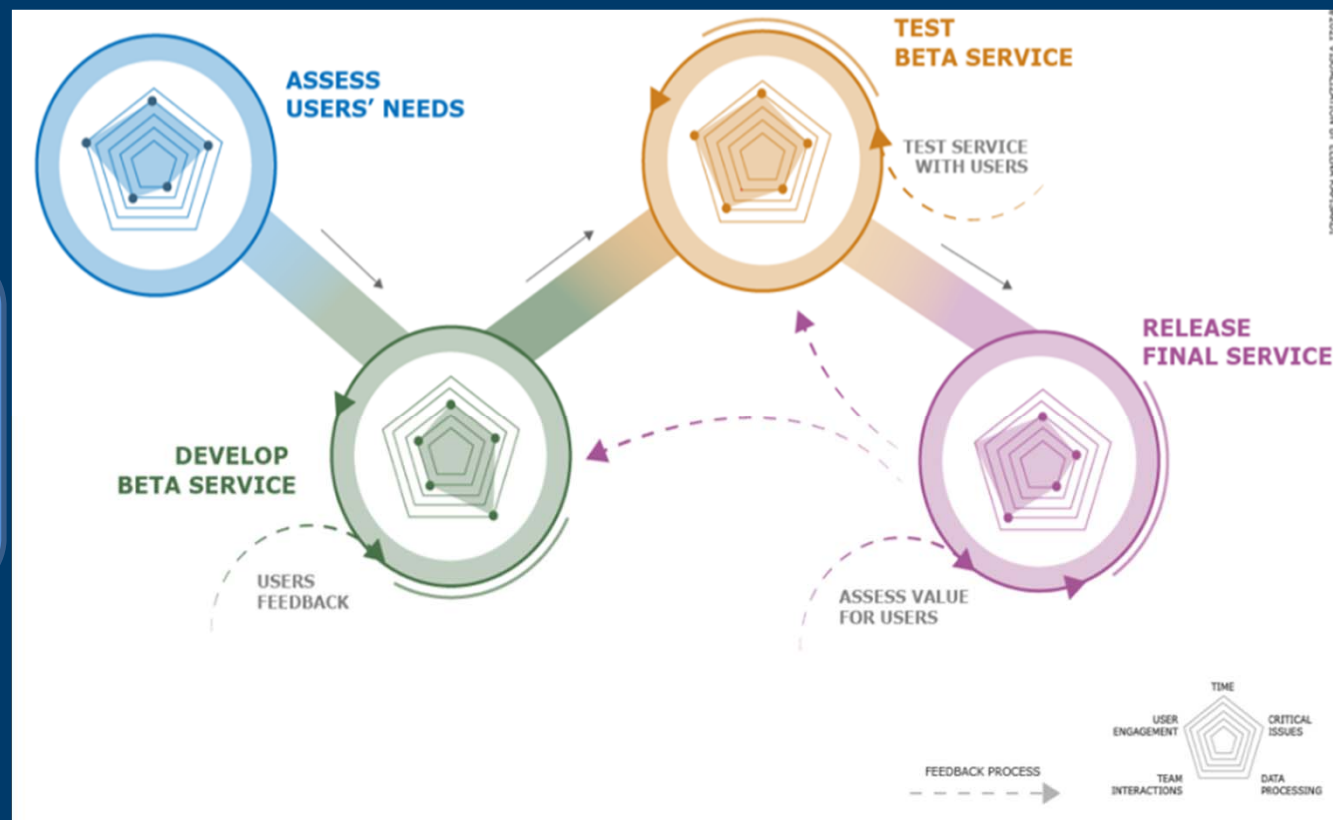

Techniques for mining data and prepare tailored information for the services (eg. trends and projection for extreme events).

Learn from potential users and translate climate information into practice.

Climate services are an interactive and participatory process to support central governments, private companies and local administrations in managing the risk associated with climate variability.

- Sectoral climate services play a key role offering tailored climate information.

Climate services are an interactive and participatory process.

**Turning climate-
related information
into added value for
traditional
MEDiterranean
Grape, OLive and
Durum wheat food
system.**

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 776467.

Coordination

Research

Academy (EU, UK & Colombia)

SMEs and service providers

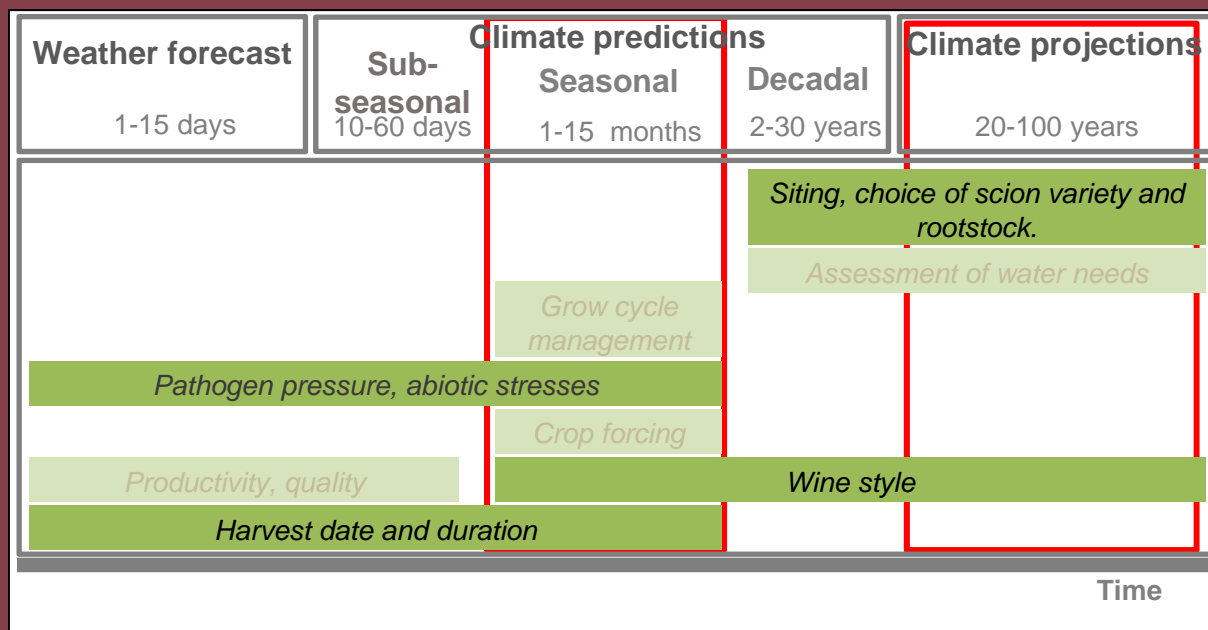

Agri-food industry

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 776467.

Grape/wine: key actions

Identification of key bio-climatic indicators

After collecting the key requirements, identifying the key decision, starting working on the trust/value

SprR	Spring Precipitation
GST	Growing Season Temp
SU35	Summer days (>35°C)
HarvestR	Harvest Precipitation
WSDI	Warm spell

Verification with users

Input from users: **bad** vs **good** years: **1988,1993 2002** vs **2007-2011**

Sources of risks for infestations identified:

1. High/Low **Spring Precip** (if high rainfall risk doubled!)
2. High **Harvest Precip**
3. Low **Growing Season Temp**

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 776467.

HISTORICAL CLIMATE
Understanding

SEASONAL FORECASTS
Operational planning

LONG-TERM PROJECTIONS
Strategic decision-making

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 776467.

DETAILED HISTORICAL INFORMATION HELPS UNDERSTAND WHAT HAPPENED AND WHY

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 776467

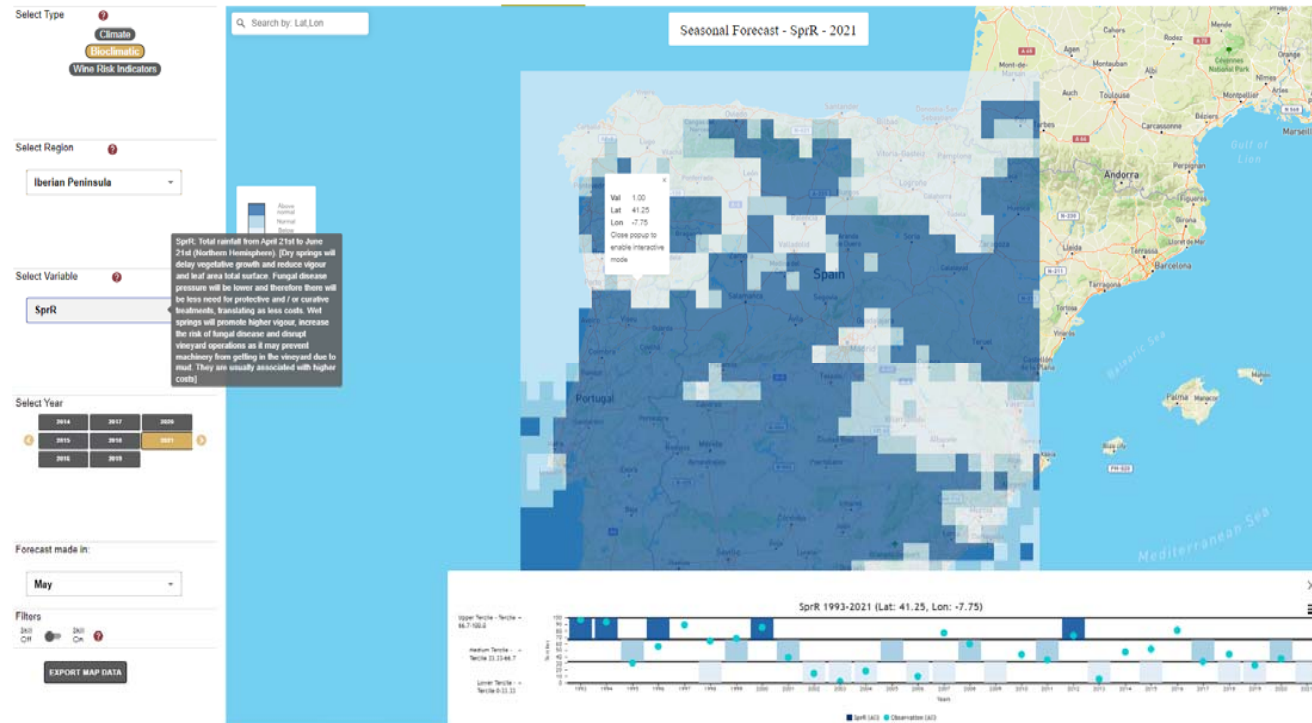

High-resolution historical evolution for each climate variable indicator and index help explain changes observed in plant phenology, effects of extreme events and consequences over product yields, quality and profitability

SKILFUL PREDICTIONS PROVIDE UNPRECEDENTED LEVEL OF RISK MANAGEMENT FOR CLIMATE IMPACTS

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 776467

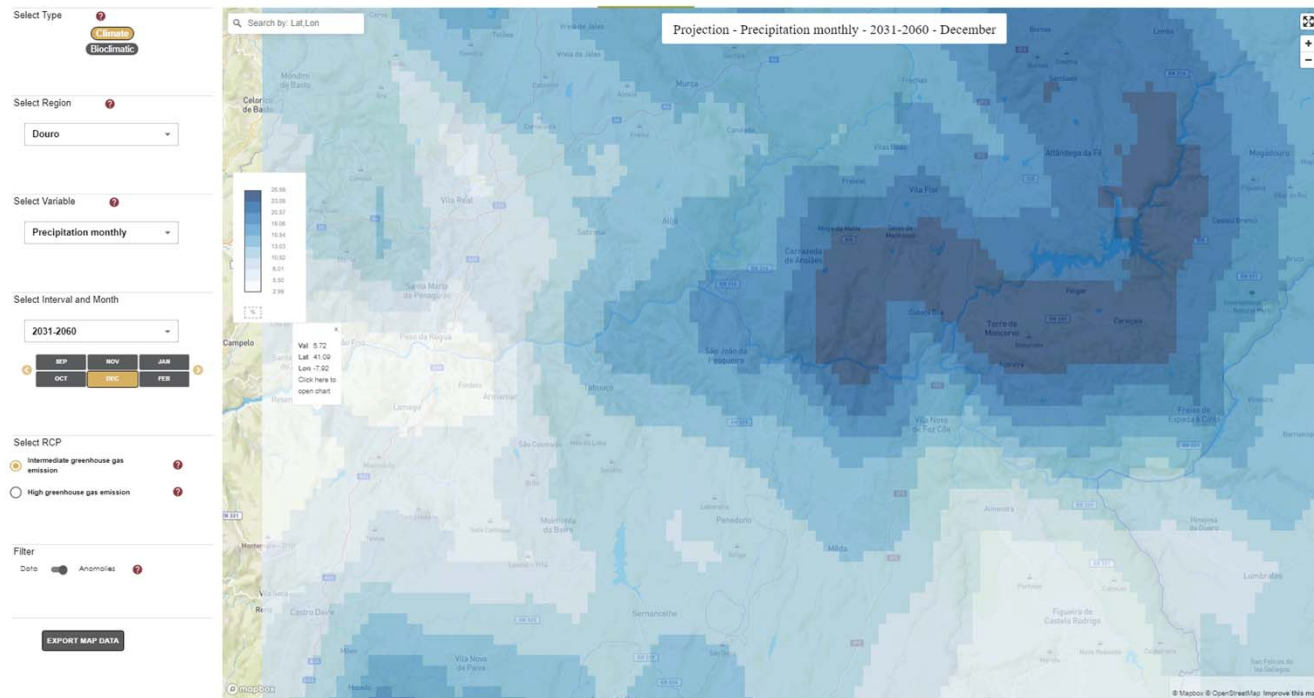

Seasonal forecasts allow for anticipating high-pest pressure or earlier harvests adjusting expenditure and safeguarding overall profitability.

A COMPLETE PACKAGE OF CLIMATE INFORMATION, ACCESSIBLE, EASY, INTUITIVE AND INTEROPERABLE CREATED BY USERS FOR USERS

This project has received funding from the European Union's
Horizon 2020 research and innovation programme under grant
agreement No 776467

Long-term projections help choose adapted varieties and decide on water availability for viability assessment of sites, supporting the future of investments, business models and policy-making.
